Example of Excel file for engraving or pre-printing:

This is an example of how your Microsoft Excel file should be submitted to Impact, Inc. for engraving or pre-printing.

If, for example, you need three lines of text engraved/pre-printed, each line of text must be in a separate column in your Excel spreadsheet.

Only the text to be engraved/pre-printed should be on the spreadsheet. Other information pertaining to the engraving/pre-printing should be on your purchase order or in the body of an email. IE: color, size, quantity, material, etc.

A separate file is needed for each size and color. IE: 1"x3" Blue with White text and 1"x3" Red with White text should be on two separate files.

Please email your file or questions to: sales@impactwiremarking.com for review.
